DSP2018FALL HW1

資工碩二 R06922134 葉沛陽

Environment

CSIE workstation linux11(gcc 8.2)

How to execute

make

```
./train ($iterations) model_init.txt seq_model_01.txt model_01.txt ./train ($iterations) model_init.txt seq_model_02.txt model_02.txt ./train ($iterations) model_init.txt seq_model_03.txt model_03.txt ./train ($iterations) model_init.txt seq_model_04.txt model_04.txt ./train ($iterations) model_init.txt seq_model_05.txt model_05.txt ./test modellist.txt testing_data1.txt result1.txt ./test modellist.txt testing_data2.txt result2.txt
```

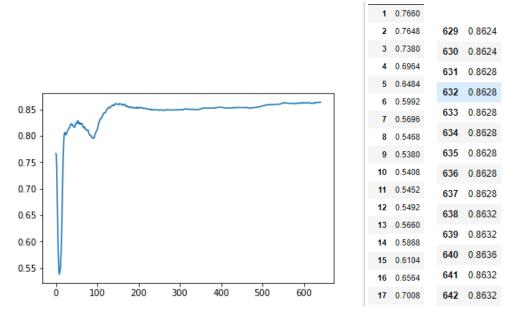

make clean

Summary of results

使用 iteration = 900 時,獲得 87.04%的準確率。 來作為繳交的結果。

```
r06922134@linux12:~/hw1_r06922134
static void dump_models( HMM *hmm, const int num )
              cal acc.cpp
                            -o cal_acc
:06922134@linux12 [~/hwl r06922134] ./train 900 model init.txt seq model 01.txt
odel 01.txt
:06922134@linuxl2 [~/hwl_r06922134] ./train 900 model_init.txt seq_model_02.txt
odel 02.txt
:06922134@linuxl2 [~/hwl_r06922134] ./train 900 model_init.txt seq_model_03.txt
odel 03.txt

```

Analysis

X 軸為 iterations, Y 軸為準確率。

可以看到準確率一開始有達到 76%左右,不過中間有往下掉到 53%左右,當 iteration 夠高之後,準確率大概維持在 85%左右,雖然有點起伏但還是有上升的趨勢。

原本打算跑到 2000 iterations,看看是否到達一定 iteration 後準確率會不升反 降,但 deadline 前只來的及跑到 642iterations。

因此,除了 $1^{\sim}642$ iterations 外,我也有另外個別試試更高的 iteration 觀察它們的準確率。

iters	750	900	1000	1500	2000
асс	86.76%	87.04%	86.96%	87.00%	86.96%

可以看出其實,準確率大致上就是在 87%左右了,已嘗試過的結果來說 900 iterations 可以得到最高的準確率,而即使是他兩倍以上的 2000 iterations 也沒有比他高的準確率。
